# Microbiology capability Development program

Proficiency testing (PT), or interlaboratory comparison, is essential for quality assurance and to ensure laboratory performance. Supelco® PT schemes and test materials provide essential performance data to monitor and/or prove competence to customers as well as regulatory or accreditation bodies.

In our continuous pursuit to support capability development of analysts, Merck is pleased to announce its **“Microbiology Capability Development Program”** under which we are inviting expression of interest from microbiologists in different sectors to participate in analyte-driven proficiency testing programs customized for India.

**This program is funded and supported by Merck as a part of its PT awareness drive.**

In order to support the program, we ask that you click on **this link** and participate in a 2-3 minute survey.

## Thank you!
